Dashboard

Contains navbar with options of dashboard make a sale, product setup, check stock, stock updation ,analytics and settings.

the dashboard will contain a welcome name with note, total order count todays revenue and total gross profit and low stock warning.

make a sale

In make a sale section there will be search option of barcode and search manually then an inventory list and in downside a card which will show selected item details with add to cart button. A panel where item in cart will be shown with details and option to add discount to sample item.

Then a subtotal ,net total , discount on whole sale, amount received, change returned, payment method cash card mobile banking, a button to clear cart, a button to decrement item and a button to toggle it as return item. A save order print receipt and a clear button

product setup

This will contain drop boxes as req. Input fields are

- Fabric type
- Fabric material
- Fabric color
- Wholesale price
- Retail price
- Initial stock
- Reorder limit

- Barcode as the barcode with all these details will be generated and a print option to print a barcode according to stock insertion as if 20 items are added, a pop up will confirm as 20 barcode should be printed.
- A save button which will save the item in stock. The input field will be filled till the clear option is printed as the input field of color will be removed which will allow us to add stock of item with diff. Color but with same fabric material,type,price etc

check stock

With this we can see stock, as there will be option to edit stock and delete stock with confirmation

stock updation

- In this we can add or make changes to stock like if we want to update stock count we can select the item from dropbox or can scan the item barcode and can add the stock which will contain a detail box of item name ,type ,id, qt added ,reason, date logged and reason.
- There will be a separate view of damage items where for damage item data will be saved as if item is damage we can scan from barcode and mark it as damage or stain etc. This will also contain item name type id qt removed reason date logged and reason.

analytics

This section is all about profit and loss. At first we can see total revenue gross profit and order count. Then there will be sub sections as

- best selling fabrics containing details of best selling fabric
- Salesman performance as who make a lot sale with name,role ,invoice and revenue generated
- Daily financial summary with details of date ,order count, subtotal, discount ,net revenue ,gross profit
- Detailed sales log with receipt number ,date and time, salesman ,subtotal ,discount ,net total, gross profit ,change and refund.
- This will also contain section which contain selected item details as barcode ,fabric,payment method,unit price,quantity,total amount,item profit

Settings

This will contain input fields which will be shown on screen as shop name shop phone shop location and separate view of username full name role assigned and password, where admin can create or delete user details.
